🔥 **1. TEST PLAN (Full clear concept)**

✅ **Definition (exam me likh):**

A Test Plan is a document that describes how testing will be performed, what will be tested, and who will do the testing.

👉 **Human Explanation:**

Soch tu ek movie bana raha hai 🎬
Shoot start karne se pehle pura plan banta hai — kaun actor, kaun scene, kab shoot.

👉 Same way:
Software testing start karne se pehle jo planning hoti hai = Test Plan

👉 **Important Points:**

- Objective → kya check karna hai
- Scope → kya test karenge / kya nahi
- Strategy → manual ya automation
- Environment → kaha test hoga
- Resources → kaun karega
- Schedule → kab karega

👉 **Exam tip:**
"Planning document" word zarur likhna

🔥 **2. TEST CASE (Most important 💀)**

✅ **Definition:**

A Test Case is a set of steps used to verify whether a system is working as expected.

👉 **Human Explanation:**

Soch tu login page check kar raha hai 👇

- Username dal
- Password dal
- Login button click kar

👉 Ye jo step-by-step checking hai = **Test Case**

👉 **Format (must yaad):**

- Test Case ID
- Scenario

- Steps
- Expected Result
- Actual Result
- Status

👉 **Exam tip:**
Table bana ke likhega = extra marks 💯

🔥 **3. ENTRY & EXIT CRITERIA**

✅ **Definition:**

Entry Criteria are the conditions required to start testing, and Exit Criteria are the conditions required to stop testing.

👉 **Human Explanation:**

Soch tu exam dene ja raha hai 📚

👉 Entry:

- Hall ticket hai
- ID hai

👉 Exit:

- Paper complete
- Submit kar diya

👉 Same in testing:

- Entry = start hone ke rules
- Exit = finish hone ke rules

🔥 **4. DEFECT REPORT**

✅ **Definition:**

A Defect Report is a document that contains details of a bug found during testing.

👉 **Human Explanation:**

Soch tu app use kar raha hai aur crash ho gaya 💥
Tu developer ko bolega:

- kya kiya tha
- kya hona chahiye tha

- kya actually hua

👉 Ye pura explanation = **Defect Report**

👉 **Important Fields:**

- Defect ID
- Description
- Steps
- Expected Result
- Actual Result
- Severity
- Priority

🔥 **5. EQUIVALENCE PARTITIONING (EP)**

✅ **Definition:**

It is a technique where input data is divided into groups that behave similarly.

👉 **Human Explanation:**

Soch teacher bolta hai:
👉 18–25 age wale eligible hai

Toh tu kya karega?

- 20 test karega ✅
- 30 test karega ❌

👉 Har number check nahi karega — group bana lega

👉 Ye grouping = EP

🔥 **6. BOUNDARY VALUE ANALYSIS (BVA)**

✅ **Definition:**

It is a technique where testing is done on boundary values.

👉 **Human Explanation:**

System bolta hai:
👉 1–10 valid hai

Toh sabse risky kya hai?
👉 **edges (1 aur 10)**

👉 Test:

- 0 ❌
- 1 ✅
- 10 ✅
- 11 ❌

👉 Ye edge testing = BVA

🔥 **7. STATEMENT COVERAGE**

✅ **Definition:**

It ensures that every statement in the code is executed at least once.

👉 **Human Explanation:**

Soch code me 5 lines hai
👉 Test case se sab lines run honi chahiye

👉 Tab bolte hai → good coverage

🔥 **8. DECISION / BRANCH COVERAGE**

✅ **Definition:**

It ensures that all possible decision outcomes (true/false) are tested.

👉 **Human Explanation:**

Agar code me hai:

if (x > 10)

👉 Toh tu kya karega?

- x = 15 → TRUE
- x = 5 → FALSE

👉 Dono side check = branch coverage

🔥 **9. SEVERITY vs PRIORITY**

👉 **Human Explanation:**

👉 **Severity = problem kitni badi hai**
👉 **Priority = kitni jaldi fix karna hai**

Example:

- App crash → High Severity 🚨
- Button color wrong → Low Severity

🔥 **FINAL UNDERSTANDING (IMPORTANT)**

Bhai ek line me yaad rakh 👇

- Test Plan → Planning
- Test Case → Checking steps
- Entry/Exit → Start & End
- Defect Report → Bug explanation
- EP → Group testing
- BVA → Edge testing
